

Emilia Romagna air quality plan and RIAT+

Michele Stortini
Regional Air Quality Center, ARP AE Emilia-Romagna

Challenges and questions

- What are the reduction emissions that we have to reach in order to comply EU limit?
- Which is the best way to do this?

Integrated Assessment Models

- **RIAT+** (Regional Integrated Assessment Tool) have been developed in the framework of the LIFE OPERA project to support regional/local authorities in the definition, application and evaluation of air quality plans policies, devoted to the reduction of population exposure to PM₁₀, PM₂₅, NO₂, O₃

Run Results

RIAT + CORE SYSTEM

Scenario analysis:
assesses the impacts of
proposed actions

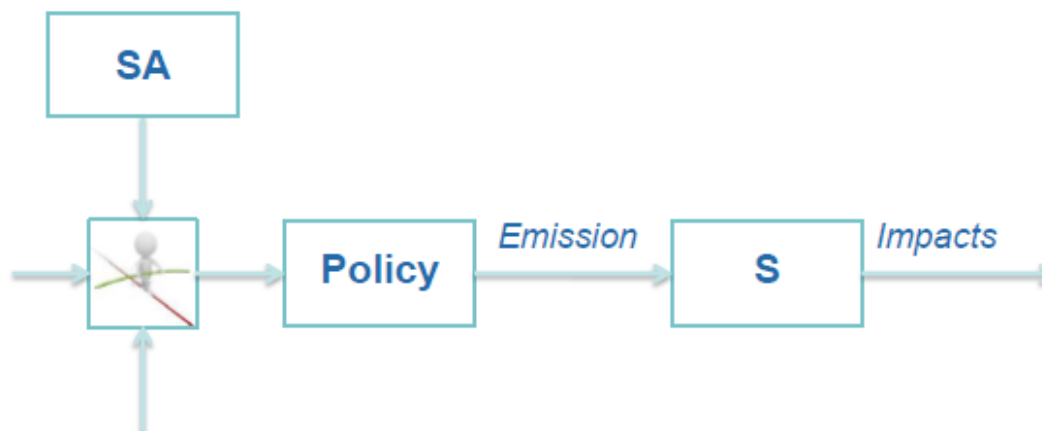

**Optimization
approach:**
identifies emission
reduction measures
maximizing the
environmental benefits
and minimizing costs

Scenario analysis

In RIAT+ scenario analysis is possible in two ways:

1. Emission (macrosector) level – *aggregated approach*
2. Technology level – *detailed approach*

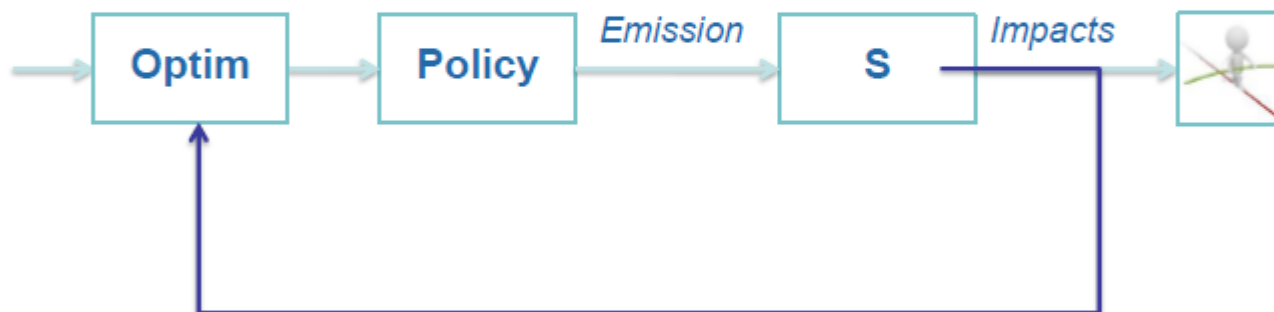

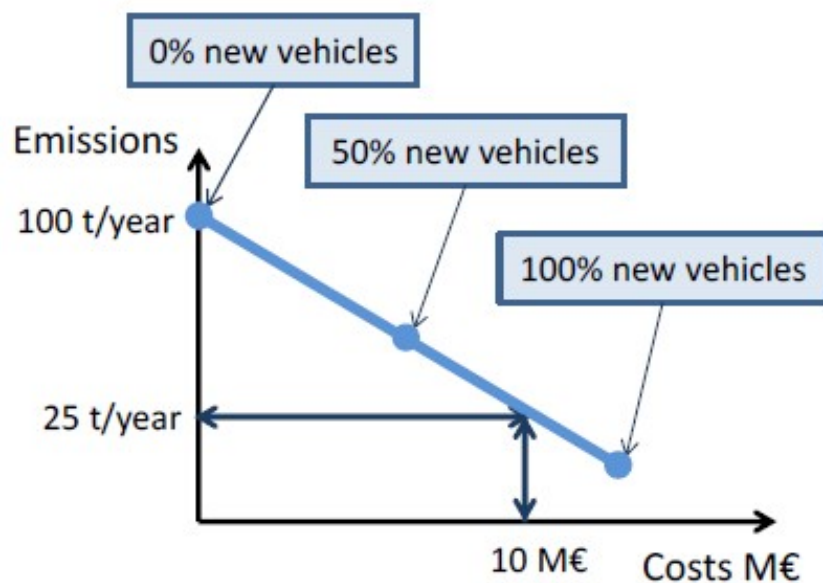

Optimization analysis

In RIAT+ optimization analysis is possible in two ways:

1. Cost-effectiveness – *best technologies at a fixed cost*
2. Multi-objective – *best technologies at varying costs*

Emissions and technology

When a new technology (t) replace an old technology (0) in a sector of activity (s):

$$C_{s,t} = \alpha_t \cdot c_t \cdot A_s$$

Cost [M€/year]

Application rate of the new technology t

$$E_{p,s,t} = \alpha_t \cdot e_{p,t} \cdot A_s + (1 - \alpha_t) \cdot e_{p,0} \cdot A_s$$

Emission [ktonnes/year]

Emissions factor of the new technology

Emission factor of the old technology

Source Receptor Relationship

$AQI(x,y) = F_{S/R}$ (quadrant Emissions)
4 quadrants emissions (point/areal) for
6 precursors

CTM training
scenarios:
B = CLE + 15%
H = MFR - 15%

SCENARIOS	AREAL AND POINT EMISSIONS				
	NOX	VOC	NH3	PM	SO2
0	B	B	B	B	B
1	L	L	L	L	L
2	H	H	H	H	H
3	H	L	L	L	L
4	L	H	L	L	L
5	L	L	H	L	L
6	L	L	L	H	L
7	L	L	L	L	H
8	H	H	L	L	L
9	H	L	H	H	H
10	H	L	H	L	L
11	H	L	H	L	H

Optimization

Multi-objective approach

$$\min_x J(x) = \min_x \left[AQI(x) \quad C(x) \right]$$

$$x \in X$$

Cost-effective approach

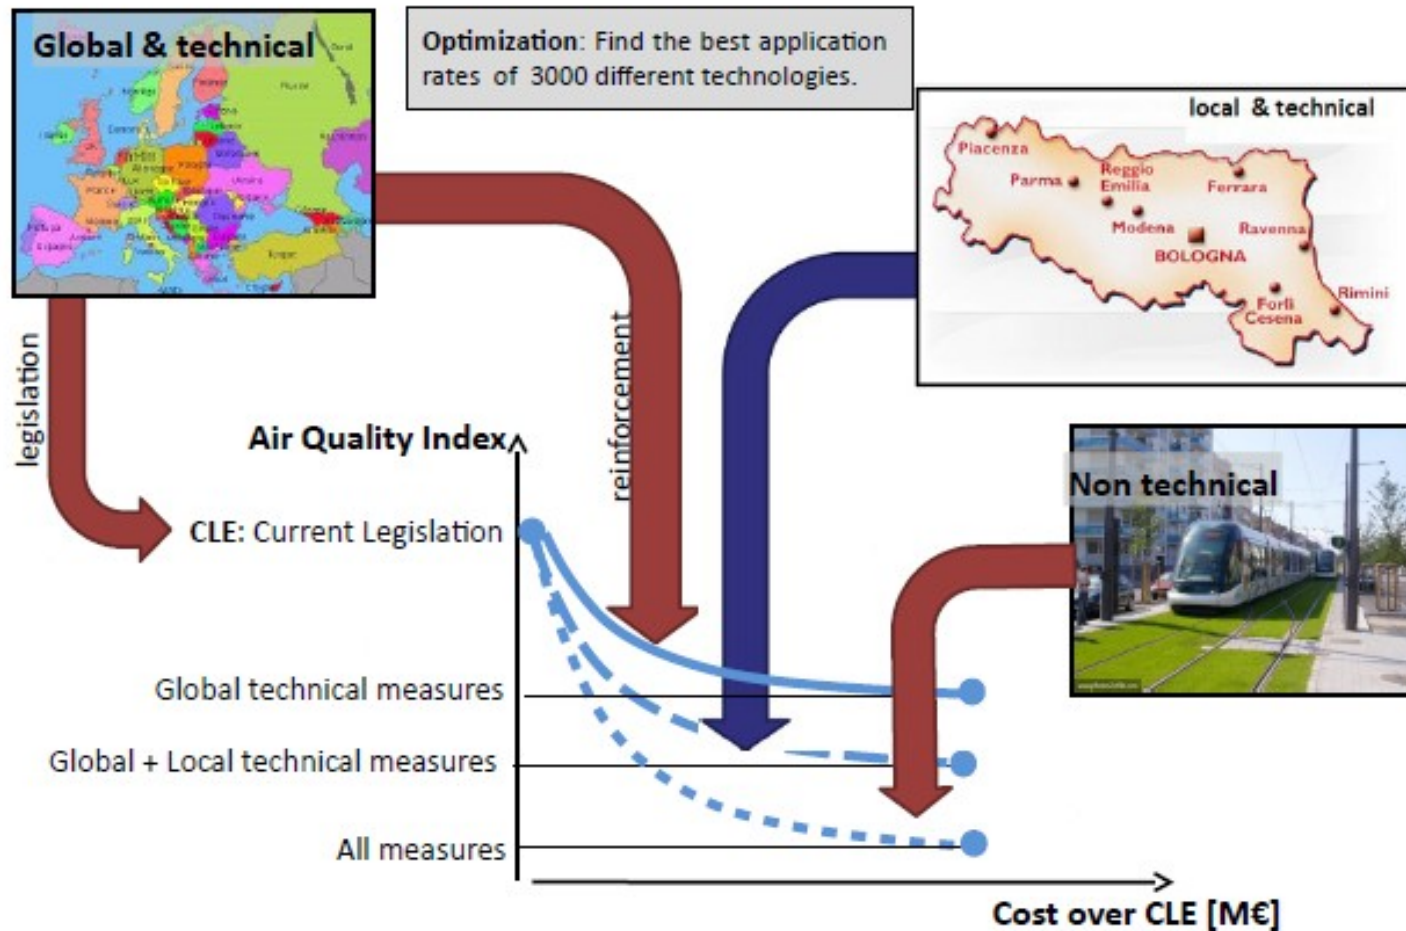

$$\min_x AQI(x)$$

$$C(x) \leq L$$

Control variables
(application rates):

- Technical measures
- Non technical measures

The most effective measure

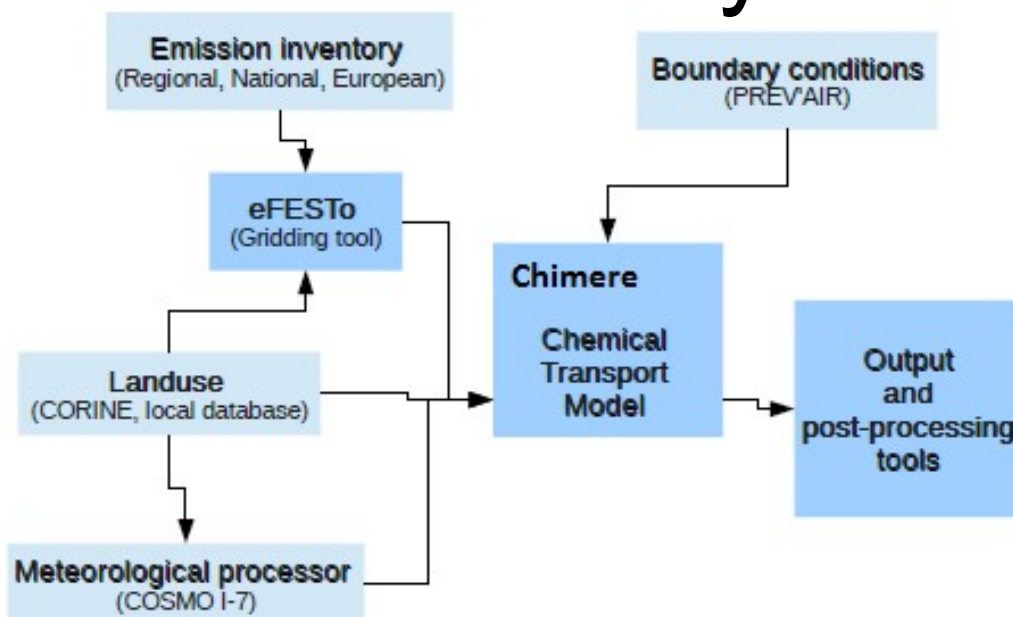

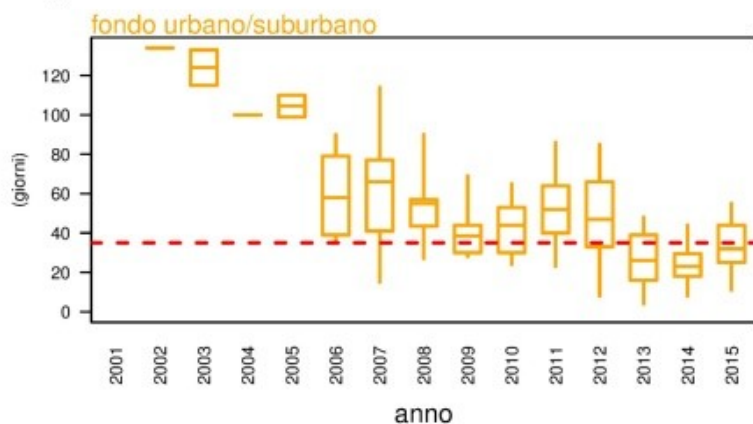

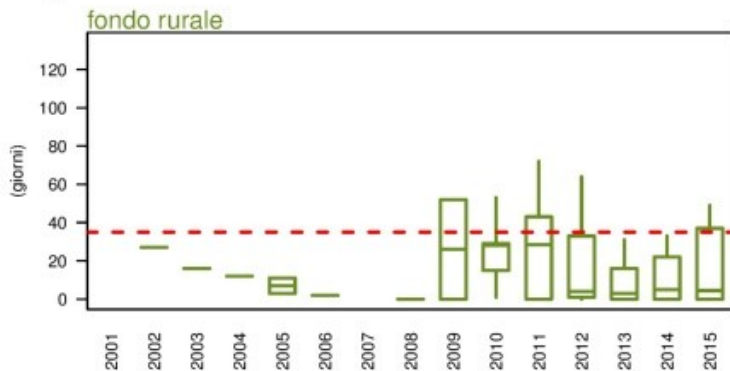

The Emilia-Romagna AQ plan: PAIR2020

NINFA Air Quality Modeling System

NINFA has been used to to prepare simulations for S/R model, simulate basecase, CLE2020, as well as target and PAIR2020 emissions scenarios

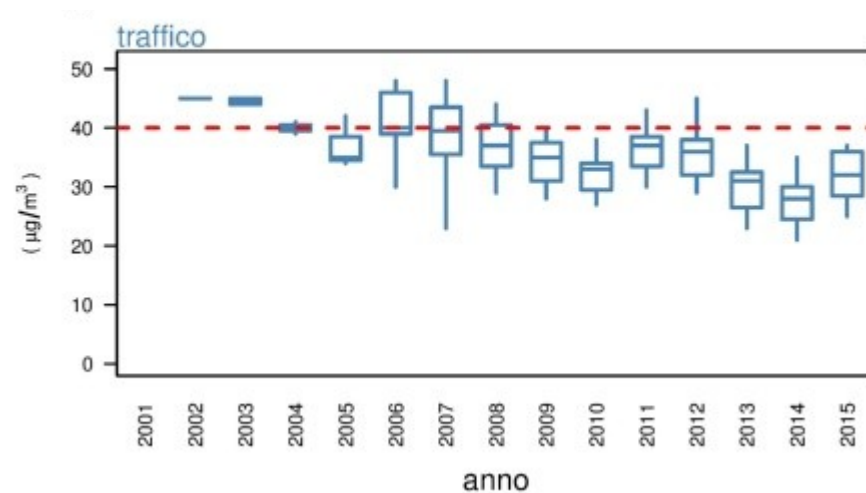

PM10 Number of exceedances of daily values

PM10 yearly average

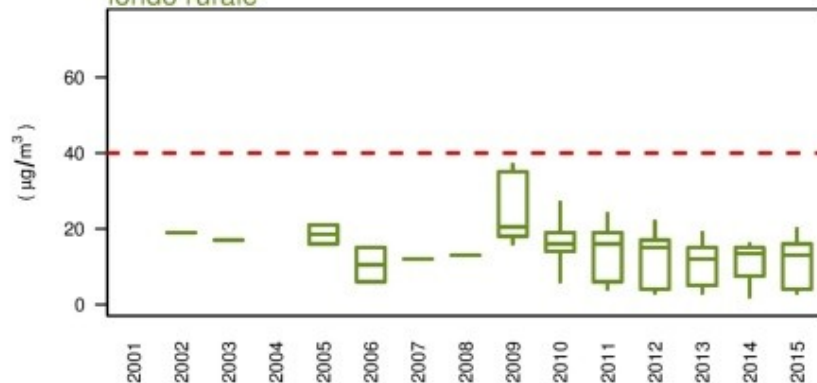

biossido di azoto (2001-2015)

media annua

tutte le stazioni regionali (escluse industriali), divise per tipologia

fondo rurale

fondo urbano/suburbano

NO₂ yearly average

PM10 daily mean: actual and trend scenario

Base case(2010)

Legend:

- RED: exceedances every year at large scale
- YELLOW with RED spots: local exceedances every year
- GREEN with YELLOW spots: local exceedances in "bad" year
- GREEN : no exceedances

**CLE 2020 (GAINS-I SEN-v2013 +
Regional Domestic, Traffic,
Energy)**

Maps are corrected for the effect of the interannual variability due to meteorology and subgrid variability

RIAT+ output from E-R PAIR2020

Emilia-Romagna A.Q. action plan:
measures per macro-sector for the
target scenario (RIAT+ output)

Emilia-Romagna A.Q. action plan:
identification of the target scenario by the
cost-effectiveness analysis (RIAT+)

Emissions reduction target

% EMISSIONS REDUCTION 2020	COV	NH3	NOx	PM10	SO2
Target scenario respect to the 2010 emissions	-32%	-48%	-44%	-30%	-2%
CLE 2020 trend scenario respect to the 2010 emissions	-17%	-9%	-24%	-24%	+9%
Target scenario respect to the CLE 2020 emissions	-18%	-43%	-26%	-8%	-10%

Total emissions for each scenario Emilia-Romagna domain (tons)

PAIR2020:measures

Industry

Building insulation

Efficiencies in industrial process

Substitution of burning oil with diesel fuel

Domestic

Building insulation and high efficiency boilers

Reducing use of fireplaces

Substitution of diesel fuel with natural gas

Increase efficiency of heating

National measure

Speed reduction in motorway and other measure to be defined

Traffic

Stop "old" vehicles (i.e. EURO2 gasoline, EURO3 diesel)

Increase Local public transport, pedestrian areas, cycling line, LEZ, etc

Encourage fleet renewal

Bus replacement (< EURO3)

Encourage reduction of private car in small urban area and in around cities

Encourage sustainable logistics in the cities

Ecodriving

Agriculture

Agriculture: animal house adaption to reduce NH3

Agriculture urea free fertilizer

Encourage tractor fleet renewal

PAIR2020:emissions reduction

PM10 daily mean: trend scenario

Target scenario (RIAT+)

PAIR2020

PM10, media annua nei capoluoghi

Conclusions

The RIAT+ tool implemented in Emilia-Romagna help ARPAAE and local government to define the Regional Air quality action and most effective actions.

Despite significant reductions, the plan does not guarantee the compliance on the number of exceedances of the daily value for PM10 and average annual No2 everywhere. Additional actions are needed at the municipal level

Help us to increase awareness of the importance of action in sectors traditionally not considered in air quality action plan such as agriculture

But this is not the end

At the end of March kick off meeting of PREPAIR (Po Regions Engaged to Policies of AIR) , LIFE15 IPE/IT/000013

PREPAIR project

Implement actions in the territory of the Po Valley and Slovenia in order to improve air quality and comply with Dir. 2008/50/EC.

The general objectives are:

- Implement measures included in the Air Quality Plans (AQPs) and in the Po Valley Agreement,
- Increase know-how and reinforce capacity building within public authorities and private operators;
- Strengthen coordination among Po Basin and Slovenia authorities in the field of air quality;
- Establish a permanent networking structure that involves the environmental agencies
- Produce homogeneous assessment reports on the effectiveness of PREPAIR concrete actions on air quality
- Assess the effectiveness and resources needed for measures to improve air quality
- Create a community that recognises the risks for human health and for the environment posed by air pollution
- Create a network of national, regional and local governments, research centres and other stakeholders.
